3.3.3.6

EE24BTECH11059 - Yellanki Siddhanth

Question:

Construct a triangle ABC with side $BC = 6$cm, $B = \angle 45°$, $A = \angle 105°$

Solution:

We know that $\angle A + \angle B + \angle C = 180°$.

$$\angle C = 180 - \angle A - \angle B = 30° \tag{0.1}$$

Steps to construct the triangle are:

1) Draw a line segment BC of length $6cm$ using a ruler.
2) At point B construct $\angle XBC$ of measure 45°.
3) At point C construct $\angle YCB$ of measure 30°
4) Extend BX and CY and label their point of intersection as A.

ΔABC is the required triangle.
